Git Project Workflow

Create repository for project

master branch

Add partner as collaborator

Clone repo to each partners local environment
git clone your-repo-url

Partner 1

Create new branch to work off of
git checkout -b name-of-branch

Make changes, commit,
push them to github
git add .
git commit -m 'meaningful message'
git push --set-upstream origin name-of-branch

Partner 2

Create new branch to work off of
git checkout -b name-of-branch

Make changes, commit,
push them to github
git add .
git commit -m 'meaningful message'
git push --set-upstream origin name-of-branch
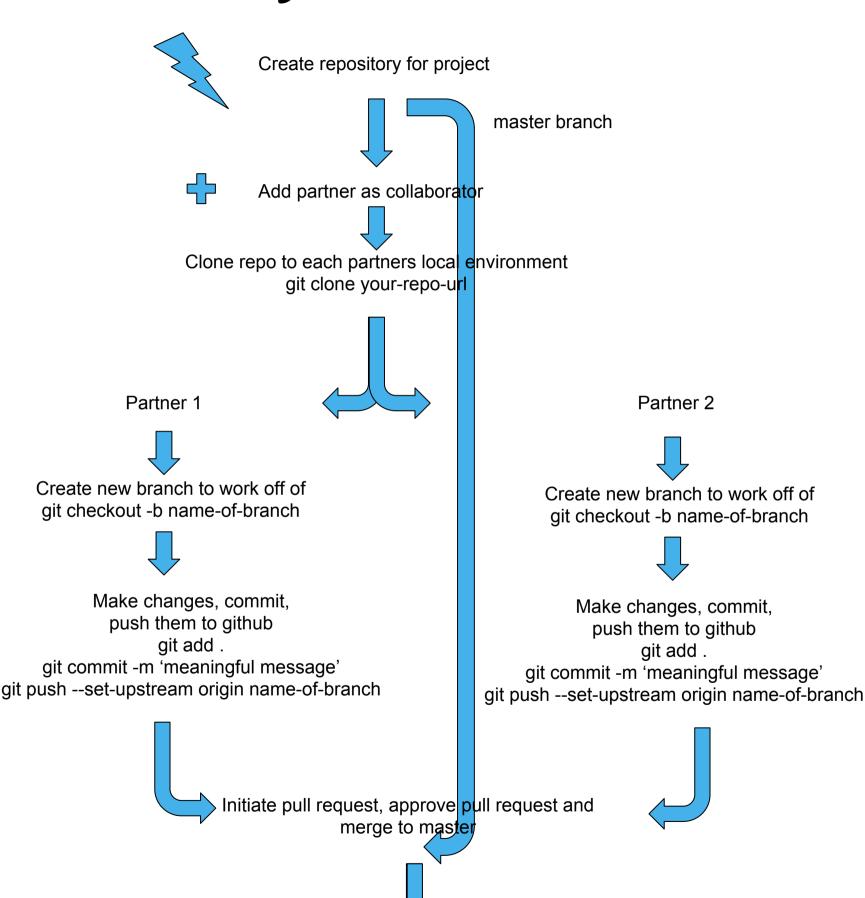

Initiate pull request, approve pull request and
merge to master

Pull new master to local environment
git checkout master
git pull

Pull new master to local environment
git checkout master
git pull
